

Pharmacy Management System

Algorithm and Flowchart

Algorithm / Steps

1. Start.
2. Enter medicine details such as Medicine Name, Medicine ID, Price, Quantity and Expiry Date.
3. Enter customer details such as Name and Mobile Number.
4. Select the medicine required by the customer.
5. Check whether the medicine is available in stock.
6. Check the expiry date of the medicine.
7. If the medicine is expired, display "Medicine Expired" and stop the sale.
8. If the medicine is available and not expired, enter the required quantity.
9. Calculate the amount:
 $\text{Amount} = \text{Price} \times \text{Quantity}$.
10. Add the amount to the total bill.
11. Update the medicine stock:
 $\text{Quantity} = \text{Quantity} - \text{Sold Quantity}$.
12. Display the final bill (Medicine details, Amount, Total Bill).
13. Stop.
