

Here is a ready-to-use prompt for a Pharmacy Management System including Medicine Details, Customer Details, Expiry Date, Sales, and Bill Calculation:

Writing

Create a modern, user-friendly Pharmacy Management System with a clean and professional UI.

1. Medicine Details

Create a medicine management section with:

Medicine ID

Medicine Name

Company/Manufacturer

Category

Batch Number

Quantity

Purchase Price

Selling Price

Manufacturing Date

Expiry Date

Stock Status

Search, Add, Edit and Delete options

2. Customer Details

Create a customer management section with:

Customer ID

Customer Name

Mobile Number

Address

Date of Purchase

Purchase History

3. Expiry Date Management

Add an expiry-date tracking feature:

Display medicine expiry dates

Show medicines that are already expired

Show medicines expiring soon

Provide expiry alerts

Prevent the sale of expired medicines

4. Sales Management

Create a sales section where the user can:

Select/search a medicine

Select customer

Enter quantity

Automatically display selling price

Calculate item subtotal

Add multiple medicines to one bill

Update stock automatically after sale

5. Bill Calculation

Create an automatic billing system with:

Medicine Name

Quantity

Rate

Subtotal

Discount

Tax/GST

Grand Total

Amount Paid

Balance/Change

Bill Number

Date and Time

Use the formula:

$\text{Subtotal} = \text{Quantity} \times \text{Selling Price}$

$\text{Grand Total} = \text{Subtotal} - \text{Discount} + \text{Tax/GST}$

6. Bill/Invoice

Generate a professional printable invoice containing:

Pharmacy Name and Address

Bill Number

Date

Customer Details

Medicine details

Quantity

Rate

Subtotal

Discount

GST/Tax

Grand Total

Payment Status

UI Requirements

Responsive design for mobile and desktop

Simple navigation sidebar

Dashboard with total medicines, available stock, expired medicines, today's sales, and total revenue

Search and filter options

Clean forms and tables

Clear success/error messages

Use a professional pharmacy-themed design

Keep the code simple and suitable for a student project.
